

There's ProGrade... and then there's ÜberGrade.

Which one are you? At GRK we're always thinking about the little stuff. In the fastener business that's all there is. But it's the little stuff that can make all the difference. Take the cutting pockets on our reengineered R4 for instance; look closely and you'll see that our cutting pockets actually have cutting pockets. The result is the cleanest countersink you can imagine without pre-drilling...and that is ÜberGrade.
