

R4™ Multi Purpose Screw

- patented -

- Self-tapping
- Countersinking head
- Patented head & thread
- No pre-drilling
- No stripped heads
- CEE Thread

GRK's R4™ self-countersinking screw has a new underhead with saw-blade like cutting teeth and six self-contained cutting pockets. Together they act similar to a circular saw-blade, transporting the drill dust away from the edge of the screw hole while cutting a perfectly clean hole into even the most brittle materials without cracking any surface treatment. This design also further enhances the R4™'s versatility by allowing the fastener to be installed without countersinking into even the hardest woods. The screw head closes the hole off with precision, leaving no damaged fibers around the head.

R4™ screws 2" and longer have a four threaded CEE Thread. This enlarges the screw hole for the non-threaded portion of the fastener, allowing the wood to settle easily. It increases the screw's drawing strength and reduces the friction on the screw shank that lowers the driving torque.

The R4™ is available in 59 sizes: 4 x 3/8" to 12 x 12".

Multi-use: wood, particle board, plastic, sheet metal, cement fiberboard, composite decking, wood decking, melamine.

Some sizes available in **PHEINOX™** Stainless Steel, see blue tabbed pages.

Technical data for the R4™ screw can be found under the Technical Data tab.
